

# ORIGINAL MULTI-MATS

## Features include:

- 75-160 tonne load capacity
- Lightweight and easy to handle and store
- Designed to support high capacity lifting with flexibility to use in various configurations
- Made from extremely high quality, heavy duty UHMW polyethylene

## Compression Test

### Test Objective

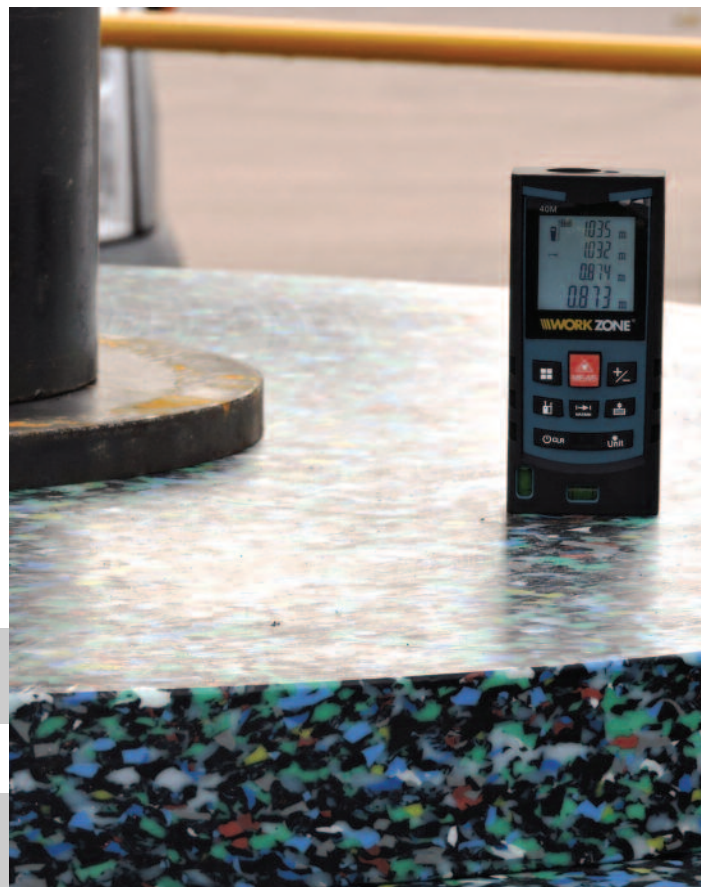

To carry out load compression test using 400mm diameter pushing block.

### Test Data

The multi mat system was placed in the compressive machine and the load gradually increased. Any deformation recorded.

### Test Results

The load was gradually increased and deflection measurements taken every 25 tonnes until an ultimate load of 237 tonnes was achieved. No failure occurred and no permanent deformation was evident after load.
